Subject: Specification Change Notice

March 28, 2017

Dear Valued Customer,

Thank you for using our high quality InertSustain and Inertsil series HPLC columns.

We will be employing the HG type end-fittings and stainless steel hardware on the following products, which are all listed on Appendix page 3 to 28.

(1) On all Inertsil analytical scale and conventional guard columns, internal diameter sizes of 2.1, 3.0, 4.0, 4.6 mm and column lengths of 30, 50, 75, 100, 150, 250 mm. The change is from the currently shipped EX type end-fittings and stainless steel hardware to HG type.

(2) On all conventional guard columns, internal diameter size of 4.0 mm and guard column length of 10 mm. The change is from the currently shipped obsolete old version type end-fittings and stainless steel hardware to HG type.

The HG type format will be adopted starting from the production on April 2017. However, due to the stock situation of the old type formats, we are not able to officially announce from which order(s) the HG type format will be delivered.

Please note that the changes were made ONLY on the end-fittings and stainless steel hardware.
Every single manufacturing process is the same as before and there are absolutely no changes on the physical properties, performance and quality of each product.
